

ULTIMAQC

Water Filter

With our User Friendly drinking water system, you can have sparkling-clear water for your commercial or residential application.

Forget the daily cost of bottled water. Your coffee, tea and juice will be more flavorful. The food you prepare – like soups, sauces, fresh fruits and vegetables – will taste better. Our drinking water system gives you a constant supply of water at its best.

Made in the U.S.A.

As with all Omnipure filters, the QC Series is ideal for use in any situation where better tasting, sediment-free water is required - beverage equipment, drinking fountains, ice machines, and other point-of-use applications. Standard media includes granular activated carbon for taste and odor reduction, polypropylene depth filtration for removal of grit and sediment, and polyphosphate to control lime and scale deposits. The QC Series is designed to give our customers a high quality, economically priced alternative to similar products on the market.
